Accepted manuscripts, Open Access and the Research Outputs Repository (ROR)

Getting published can be a complicated business! As part of the publishing lifecycle, various terms are used to reflect the status of an output - the more inclusive term for journal articles, books and book chapters, conference papers, reports, patents, and creative works.

Here is a brief description of the terms and how they are used at UniSA:

<table>
<thead>
<tr>
<th>Term</th>
<th>Description</th>
<th>Alternative term</th>
<th>Copyright owner</th>
</tr>
</thead>
<tbody>
<tr>
<td>Preprint</td>
<td>Manuscript version of an scholarly output that is submitted to the journal before peer review</td>
<td></td>
<td>Author owns copyright</td>
</tr>
<tr>
<td>Accepted manuscript*</td>
<td>Manuscript version of a scholarly output accepted for publication following peer review and revision. It includes any corrections made as a result of peer review but no copy editing or formatting contributed by the publisher</td>
<td>Author Accepted Manuscript (AAM) Postprint</td>
<td>Author owns copyright</td>
</tr>
<tr>
<td>Proof</td>
<td>Manuscript formatted as it will appear when published, to be checked by authors</td>
<td></td>
<td>Publisher owns copyright</td>
</tr>
<tr>
<td>Published version</td>
<td>Version as published, includes copy editing and publisher formatting</td>
<td>Version of record (VoR)</td>
<td>Publisher owns copyright</td>
</tr>
</tbody>
</table>

Library staff always verify the copyright for every output. In many cases, the accepted manuscript can be made publicly available, once any embargo conditions set by the publisher has expired. The Library will also automatically add the published version when available, and update the metadata in the Research Outputs Repository.

The UniSA Open Access Policy requires submission of the accepted manuscript within one month of acceptance, using the DOI or Output type options available via ROR> Deposit link.

*If publishing in a gold open access journal eg BioMed Central, PloS One, no accepted manuscript is required.
Example of Record in Research Outputs Repository

All accepted manuscripts have a coversheet attached according to the publisher’s policy, and include the DOI where the published version can be found.

Open Access Postprint
(publicly accessible version, no publisher formatting. This option only displays when publisher embargo has expired)

Restricted Published Outputs
(restricted to UniSA login, collected as archived copy for reporting purposes, eg ERA)
