Finding journal and country rank using SCImago Journal & Country Rank

The SCImago Journal & Country Rank (SJR) was developed from information contained in the Scopus database from 1996. Scopus contains more journals and conference proceedings than Web of Science, with greater coverage of humanities and social sciences and more non-English titles particularly in medicine. SJRs correlate with Impact Factors.

From your staff portal go to Library > Search our collections > A-Z databases > S > SCImago journal & country rank SJR

To find the metrics for a journal title:

- Select Journal Search
- Type the journal title and select Search

- Select the title
- Information about the journal will be displayed, for example:

**Pain**

**Country:** Netherlands

**Subject Area:** Medicine

**Subject Category:** Neurology (clinical)

**Publisher:** Elsevier. **Publication type:** Journals. **ISSN:** 03043959

**Coverage:** 1975-2012

**H Index:** 156

- The **Subject Category** includes information indicating the Quartile Ranking, i.e. Q1 means this is a journal in the top 25% for this category
To browse Journal Rankings:
- Choose a **Subject Area**, refine by **Subject Category**. The results display the SJR and other metrics including total citations, cites/document, as well as the H index
- Click on a title in the list (or a journal found through Journal Search) to see more metrics including charts and data.
